

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

By Alliah Jahncel Forteza

Project Overview

The goal of this project is to create and set up a Salesforce CRM system for HandsMen Threads, a luxury men's fashion brand. This system will help the company connect better with customers, organize and track sales, and improve marketing activities by using Salesforce tools and automation.

Objectives

The main goal of this project is to build a Salesforce CRM system that HandsMen Threads manage its customers, sales, and marketing activities in one place. The CRM aims to make customer handling easier by keeping records accurate and organized, helping the team track orders, monitor inventory, and send automatic updates to customers. It also supports business growth by improving how the company communicates with clients and how it manages stock and sales information.

Design Data Model and Security Model

A data model was planned to define how customers, order, and inventory data connect. Relationships between objects (such as Orders linked to Customers and Products) ensure smooth data flow. The security model includes user roles, profiles, and permission sets to control data access — ensuring each team only sees what they need to perform their tasks securely.

Key stakeholders include:

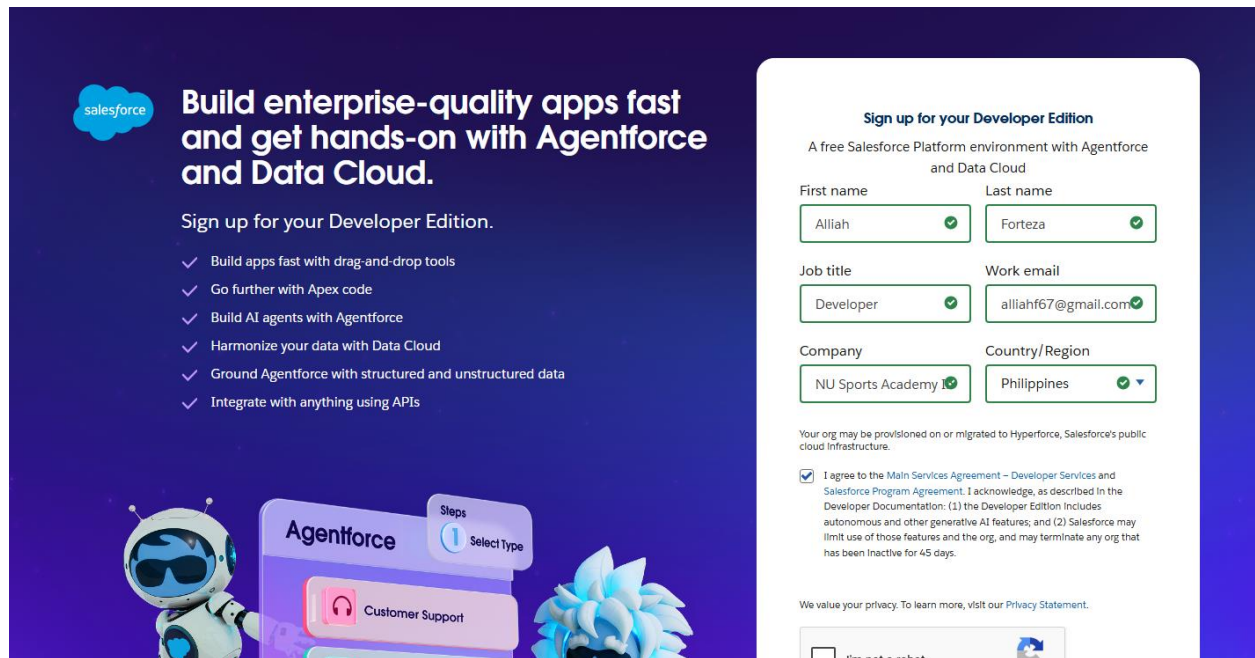

- CEO: Oversees the CRM system and monitors business reports.
- Sales Team: Manages customer information and orders.
- Inventory Team: Updates product stocks and handles low-stock alerts.
- Marketing Team: Runs campaigns and loyalty programs.

Execution Roadmap

1. Requirement Gathering: Identify user needs and data to be managed.
2. System Design: Create data models, flows, and automation plans.
3. Development: Build custom objects, fields, and automation in Salesforce.
4. Testing: Check system functions, validations, and notifications.

Salesforce Development

Salesforce Credentials Setup

The image shows the Salesforce Developer Edition sign-up form. On the left, there's a blue background with the Salesforce logo and text: "Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud." Below this, it says "Sign up for your Developer Edition." and lists five benefits: "Build apps fast with drag-and-drop tools", "Go further with Apex code", "Build AI agents with Agentforce", "Harmonize your data with Data Cloud", and "Ground Agentforce with structured and unstructured data". At the bottom left, there's an illustration of an Agentforce robot. On the right, the form is titled "Sign up for your Developer Edition" and describes it as "A free Salesforce Platform environment with Agentforce and Data Cloud." The form fields are: First name (Alliah), Last name (Forteza), Job title (Developer), Work email (alliahf67@gmail.com), Company (NU Sports Academy), and Country/Region (Philippines). There's a checkbox for agreeing to the Main Services Agreement and a "I'm not a robot" checkbox at the bottom.

Sign up for your Developer Edition

A free Salesforce Platform environment with Agentforce and Data Cloud.

First name: Alliah ✓ Last name: Forteza ✓

Job title: Developer ✓ Work email: alliahf67@gmail.com ✓

Company: NU Sports Academy ✓ Country/Region: Philippines ✓

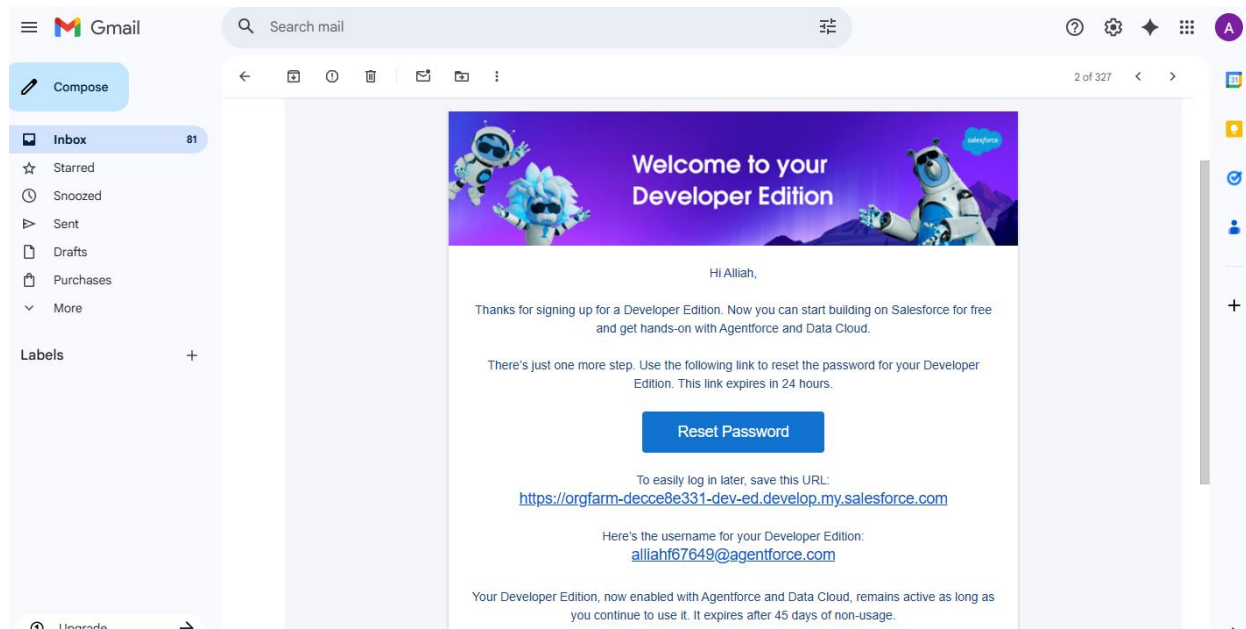

Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud Infrastructure.

☒ I agree to the Main Services Agreement – Developer Services and Salesforce Program Agreement. I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

We value your privacy. To learn more, visit our Privacy Statement.

☐ I'm not a robot

In this part, I created a Developer Account to be used in this capstone system, then filled up the following details. After that, I wait for the email to pop up in my inbox to reset and verify my account.

Data Management – Objects and Tabs

Search Setup

Setup Home Object Manager

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Marketing Campaign	Marketing_Campaign__c	Custom Object		10/21/2025	✓

In this part, I created a custom object that is needed. The following custom objects are:

- HandsMen Customer
- HandsMen Order
- HandsMen Product
- Inventory
- Marketing Campaign

After that, for the Data Management Tabs Creation, I created custom object tabs for each object.

Data Management - App Manager

For this one, I created a lightning app entitled HandsMen Threads and followed the required details for creation.

Data Management – Fields

This part contains fields that need to create in their designated objects.

HANDSMEN CUSTOMER				
Fields & Relationships				
11 Items, Sorted by Field Label				
FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
Email	Email_c	Email

Warehouse	Warehouse__c	Text(60)		

For the Inventory, we created the following fields (Warehouse and Stock Quantity).

[illegible]

Data Configuration

For the Data Configuration, I created the following validation rules in each objects.

In this part, I searched for profiles in Quick find then enter profiles, I clone the standard user then give permission for HandsMen products and Inventory Object in the object permissions set.

For this part, I created three users, Niklaus, Kol, and Kath and fill up their details.

Data Security - Permission Set

The screenshot shows the Salesforce Setup interface for Permission Sets. The left sidebar contains navigation links: Setup, Home, Object Manager, Users, Permission Set Groups, Permission Sets (selected), Custom Code, and Custom Permissions. The main content area is titled 'Permission Sets' and includes a search bar, a 'New' button, and a table of existing permission sets. The table has columns for Action, Permission Set Name, Description, and License. The last three rows of the table are highlighted in blue, indicating they are the ones created by the user.

| Clone | ZoeEventPumpC2CPermSet | | Cloud Integration User |
| Del Clone | inventory.permission.set | | |
| Del Clone | marketing.permission.set | | |
| Del Clone | sales.permission.set | | |

For the permission set, the last three below is the one I created (inventory, marketing, and sales permission sets).

Email Template

For the email template, I created first a classic letterhead for the email layout of the email template named Handsmen Threads, then proceed to creating email templates which is Oder Confirmation, Low Stock Alert, and Loyalty Program Email. And after that, I created an Email Alert for sending email when order is done or confirmed.

The screenshot shows the Salesforce Setup interface for Classic Email Templates. The left sidebar contains navigation links: Setup, Home, Object Manager, Email, Classic Email Templates (selected), and Classic Letterheads. The main content area is titled 'Classic Email Templates' and includes a search bar, a 'New' button, and a table of existing email templates. The table has columns for Action, Email Template Name, Template Type, Available For Use, Description, Author, and Last Modified Date. The last three rows of the table are highlighted in blue, indicating they are the ones created by the user.

| Action | Email Template Name | Template Type | Available For Use | Description | Author | Last Modified Date |
|--|--|---------------|-------------------|--|-----------|--------------------|
| Edit Del | Appointment for Unauthenticated User using Appointment Types - For Amazon Chime. | Custom | ✓ | Email template for confirmation of an appointment when appointments are scheduled using appointment types with Amazon Chime. | sfdcadmin | 10/13/2025 |

Here is the proof for the email confirmation.

Creating Apex Class and BatchJobs Apex

For the last 2 parts, just go to the developer console and create a file given in the skill wallet and fill up details and source codes that is given.

Deployment Strategy

For the deployment phase, the Salesforce CRM system for HandsMen Threads was moved from the development environment to production. The deployment process was done using Change Sets, which allowed the safe transfer of components such as custom objects, fields, flows, and automation rules. Before deployment, each feature was tested to ensure it worked properly and met all requirements. Once confirmed, the project was deployed to the live Salesforce environment, where end users like the sales, marketing, and inventory teams could start using it.

System Maintenance and Monitoring

To keep the system running smoothly, regular checks and updates are done to ensure data accuracy and prevent performance issues. Maintenance includes:

- Reviewing automation flows and Apex triggers to confirm they work correctly.
- Monitoring email alerts and notifications to make sure they are sent on time.

Conclusion

Working on the Salesforce CRM project for HandsMen Threads was a valuable learning experience that allowed me to apply both technical and analytical skills. It was created step by step, starting from setting up a developer account and building custom objects like Customers, Products, Orders, Inventory, and Marketing Campaigns. I added custom fields, validation rules, and permission settings to keep data accurate and secure. I also created email templates and flows to automate order confirmations, stock alerts, and loyalty updates. Apex triggers and batch jobs were added to handle automatic calculations and inventory updates.

Throughout the process, I gained a deeper understanding of how Salesforce can be used to manage real business operations from customer relationships to sales and marketing automation. There were challenges along the way, especially in setting up flows, triggers, and validation rules, but overcoming them helped me improve my problem-solving and attention to detail. This project taught me the importance of proper planning, testing, and documentation in system development. Overall, it was a rewarding journey that strengthened my knowledge of Salesforce and gave me confidence to handle future CRM-related projects.
